Manaslu Expedition

Tour Overview

Join the international Manaslu expedition to climb the world's eighth-highest peak, standing at 8,163 meters, located in Nepal. Manaslu, meaning "The Spirit-Mountain" in the local dialect, refers to a benevolent and strong deity residing within it. Toshio Imanishi and Gyalzen Norbu were the first to ascend it in 1956. The three peaks of Manaslu are often regarded as Japanese peaks since they were the first to summit them in 1956.

Today, there are half a dozen different routes on Manaslu. Its south face is considered one of the most challenging in climbing history. Manaslu attracts the highest number of climbers during the autumn season, with over 500 mountaineers reaching its summit annually.

Here are some **key technical challenges associated with climbing Manaslu:**

- **Steep Snow and Ice Slopes**:
  - Ascending the summit of Manaslu involves navigating steep snow and ice slopes.
  - Climbers must have the skills to move efficiently on these challenging terrains.
- **Technical Rock Climbing**:
  - Sections of the climb require technical rock-climbing abilities.
  - Proper techniques and equipment are essential for safety.

- **Knife-Edge Ridge**:
  - The route includes traversing a treacherous knife-edge ridge.
  - Balance, focus, and nerve are crucial during this section.
- **Crevasses and Avalanche-Prone Areas**:
  - Climbers must negotiate multiple crevasses.
  - Certain areas are prone to avalanches, demanding careful route selection.
- **High Altitude Risks**:
  - The extreme altitude poses risks such as altitude sickness, hypoxia, and cerebral edema.
  - Proper acclimatization and awareness are vital.
